## CONIFERS, ROOTED CUTTINGS AND TRANSPLANTS

The following list of rooted cuttings will be for fall to spring shipment except varieties with an asterisk (\*) are for Spring delivery, April-June. Most transplants are grown in full sun in sandy loam soil with peat and other humus added for top quality root systems.

T. Once Transplanted  
T.T. Twice Transplanted

T.T.T. Three Times Transplanted.  
\* Asterisk indicates Spring delivery

Per 100

|                                                                                                                                                                                                                            |         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| <b>Abies balsamea nana</b> (hudsonia). Also known as Abies grandis nana. Dwarf growing much like Picea abies nidiformis but slower. Very attractive broad blue gray foliage. Very rare. T. 2-4" (10 for \$5.00). Limit 25. |         |
| <b>Abies concolor.</b> (White Fir). T. 6-12" .....                                                                                                                                                                         | \$22.00 |
| <b>Cedrus Decdora.</b> Seedlings 4-8" .....                                                                                                                                                                                | 8.00    |
| Seedlings 8-12' .....                                                                                                                                                                                                      | 12.00   |
| T. 4-8" .....                                                                                                                                                                                                              | 14.00   |
| T. 8-12" .....                                                                                                                                                                                                             | 22.00   |

## Azaleas

It is best to give young Azaleas protection from wind and sun the first winter to prevent the bark from cracking. This can be done by building frames 1 foot high around the beds and shade with lath or other material. Also it is well to hold up on fertilizers after July and not water much after Sept. 1. This acts to harden off the wood, making them much hardier against severe cold weather.

\* Asterisk indicates Spring delivery

## Heathers

Heathers should be pruned after flowering to keep them compact. Those marked "T." were planted in open field beds early this summer.

(\*) Asterisk indicates Spring delivery.
